

# PHOTOMETRIC SHUTTER #440A

For use with Models 95A, 95B, 100 (rollfilm), 150, 160, 700 and 800. This accessory shutter attachment gives automatic exposure capabilities to any of the above rollfilm cameras. A selenium cell controls a vane which, in turn, controls the flow of air from a pneumatic cylinder. This cylinder controls the timing of the shutter. This is the same principle behind the shutters on the J33 and J66 auto-exposure cameras. Works with  $f/37$  and speed from  $1/10\text{sec.}$  to  $1/800\text{sec.}$  The Photoelectric Shutter is designed for use only with 3000. Body color: ivory/white.
